

## ICF Awarded Contract to Modernize Home Energy Systems Across Southern California

August 25, 2025

### *Helping Thousands of Homes Lower Bills and Lessen Strain on the Electric Grid*

RESTON, Va., Aug. 25, 2025 /PRNewswire/ -- ICF (NASDAQ:ICFI), a leading global solutions and technology provider, was recently awarded a new, multi-year \$40 million contract to implement large-scale residential energy programs across six Southern California counties. The contract was awarded in the second quarter of 2025.

ICF will partner with local community organizations and trade allies to help the counties integrate high-impact, no-cost [energy](#) and electrification upgrades into existing home infrastructures. These upgrades will help thousands of households improve indoor air quality, reduce energy bills and strengthen their resilience to extreme heat, all while easing strain on the power grid.

ICF's Sightline®, one of the utility industry's most trusted customer program analytics platforms, will be used to pinpoint communities of greatest need and continuously monitor program performance. The company will also deploy advanced digital twin technology to simulate, monitor and analyze grid impact in a virtual environment before deployment.

"Communities across the country are experiencing a tension between reliable power and affordability," said Anne Choate, ICF executive vice president for energy, environment and infrastructure. "We're proud to couple three decades of energy program experience with the latest technology to help Southern California households have more reliable and affordable energy."

ICF is one of the top utility program providers and residential electrification implementors in North America. The company provides end-to-end offerings across the energy value chain for top utilities, developers, federal agencies and state energy offices nationwide—from strategy to planning and analysis to implementation and customer engagement.
